

5 June 1957

MEMORANDUM FOR: Special Assistant, Research and Reports  
THROUGH: Acting Chief, Geographic Research  
SUBJECT: Evaluation of Employee Suggestion No. 2963

1. Subject suggestion is neither clear nor well developed as to objective. Opening paragraph indicates trainees are to decide where the photographic areas are located. This is not the usual intelligence problem. We know where we were but what did we see? Recognition and identification are the important intelligence elements sought.

2. In the ORR-D/GP Industrial Photographic Intelligence Course numerous opportunities are offered by way of photo "keys" or photo puzzle problems for students to check upon the recognition and identification features they have learned. This suggestion therefore offers nothing new. It would probably have its best chance for success if it were directed toward support of a specific program and suggested some new technique element.

3. As proposed it is recommended that the subject suggestion be disapproved for adoption.

A. C. LUNDAHL  
Chief, Photo Intelligence Division, RR
